

**Listing of claims:**

1-23. (Cancelled)

24 (New): A computer-implemented method for submitting a word processing document for translation services, the method comprising:

obtaining an original pre-translated word processing document, wherein the original pre-translated word processing document includes word processing text elements and non-word processing text elements;

receiving a request on a word processor associated with the original pre-translated word processing document to translate the original pre-translated word processing document from a first language to a second language;

sending a request to a redirector server for an address of a translation service for translating the original pre-translated word processing document from the first language to the second language, wherein the request includes a language identifier for the first language and a language identifier for the second language;

receiving, from the redirector server, the address for a translation service for translating the original pre-translated word processing document from the first language to the second language in accordance with the language identifier for the first language and the language identifier for the second language;

saving, on a user computer, a first version of the original pre-translated word processing document, wherein the first version includes the word processing text elements and the non-word processing text elements;

generating a second version of the original pre-translated word processing document, wherein the second version includes the word processing text elements and does not include the non-word processing text elements, wherein the second version includes links to the non-word processing text elements stored on the user computer;

sending the second version to the translation service indicated by the address received from the redirection server;

receiving a translated second version from the translation service, wherein the translated second version includes a translation of the word processing text elements;

obtaining the non-word processing text elements of the first version by implementing the links of the of the translated second version; and

displaying the translated second version with the non-word processing text elements populated from the links, wherein the translated second version is displayed in a display format of the original pre-translated word processing document.

25 (New): The computer-implemented method of claim 24, wherein the redirector server is a remote server accessible via a distributed computing environment.

26 (New): The computer-implemented method of claim 24, wherein the translation service is associated with a remote server accessible via a distributed computer environment.

27 (New): The computer-implemented method of claim 24, wherein the second version is HTML, wherein the HTML includes tags pointing to the non-word processing text elements saved with the first version on the user computer.

28 (New): The computer-implemented method of claim 24, wherein sending the second version includes sending the second version with an HTTP POST request.

29 (New): The computer-implemented method of claim 24, wherein sending a request to the redirector server includes an HTTP GET request, wherein the HTTP GET request includes the language identifier for the first language and the language identifier for the second language.

30 (New): The computer-implemented method of claim 24, wherein sending the second version includes launching an instance of a web browser from the word processor and submitting the second version through the web browser to the translation service.

31 (New): A computer-readable storage medium having computer-executable instruction for submitting a word processing document for translation services, the instructions comprising:

obtaining an original pre-translated word processing document, wherein the original pre-translated word processing document includes word processing text elements and non-word processing text elements;

receiving a request on a word processor associated with the original pre-translated word processing document to translate the original pre-translated word processing document from a first language to a second language;

sending a request to a redirector service for an identifier of a translation service for translating the original pre-translated word processing document from the first language to the second language;

receiving, from the redirector service, the identifier for a translation service for translating the original pre-translated word processing document from the first language to the second language;

saving, on a user computer, a first version of the original pre-translated word processing document, wherein the first version includes the word processing text elements and the non-word processing text elements;

generating a second version of the original pre-translated word processing document, wherein the second version includes the word processing text elements and links to the non-word processing text elements stored on the user computer;

sending the second version to the translation service indicted by the identifier received from the redirection service;

receiving a translated second version from the translation service, wherein the translated second version includes a translation of the word processing text elements;

obtaining the non-word processing text elements of the first version by implementing the links of the of the translated second version; and

displaying the translated second version with the non-word processing text elements populated from the links.

32 (New): The computer-readable storage medium of claim 24, wherein the redirector service is a remote server accessible via a distributed computing environment.

33 (New): The computer-implemented method of claim 24, wherein the translation service is associated with a remote server accessible via a distributed computer environment.

34 (New): The computer-readable storage medium of claim 31, wherein the second version is HTML, wherein the HTML includes tags pointing to the non-word processing text elements saved with the first version on the user computer.

35 (New): The computer-readable storage medium of claim 31, wherein sending the second version includes sending the second version with an HTTP POST request.

36 (New): The computer-readable storage medium of claim 31, wherein sending a request to the redirector service includes an HTTP GET request, wherein the HTTP GET request includes a language identifier for the first language and a language identifier for the second language.

37 (New): The computer-readable storage medium of claim 31, wherein sending the second version includes launching an instance of a web browser from the word processor and submitting the second version through the web browser to the translation service.

38 (New): A system for submitting a word processing document for translation services, the system comprising:  
a processor; and

a memory having computer-executable instructions stored thereon, the instructions including:

- obtaining an original pre-translated word processing document, wherein the original pre-translated word processing document includes word processing text elements and non-word processing text elements;

- receiving a request on a word processor associated with the original pre-translated word processing document to translate the original pre-translated word processing document from a first language to a second language;

- sending a request to a redirector service for an identifier of a translation service for translating the original pre-translated word processing document from the first language to the second language;

- receiving, from the redirector service, the identifier for a translation service for translating the original pre-translated word processing document from the first language to the second language;

- saving, on a user computer, a first version of the original pre-translated word processing document, wherein the first version includes the word processing text elements and the non-word processing text elements;

- generating a second version of the original pre-translated word processing document, wherein the second version includes the word processing text elements and links to the non-word processing text elements stored on the user computer;

- sending the second version to the translation service indicated by the identifier received from the redirection service;

- receiving a translated second version from the translation service, wherein the translated second version includes a translation of the word processing text elements;

- obtaining the non-word processing text elements of the first version by implementing the links of the of the translated second version; and

- displaying the translated second version with the non-word processing text elements populated from the links.

39 (New): The system of claim 38, wherein the redirector service is a remote server accessible via a distributed computing environment.

40 (New): The system of claim 38, wherein the translation service is associated with a remote server accessible via a distributed computer environment.

41 (New): The system of claim 38, wherein the second version is HTML, wherein the HTML includes tags pointing to the non-word processing text elements saved with the first version on the user computer.

42 (New): The system of claim 38, wherein sending the second version includes sending the second version with an HTTP POST request.

43 (New): The system of claim 38, wherein sending a request to the redirector service includes an HTTP GET request, wherein the HTTP GET request includes a language identifier for the first language and a language identifier for the second language.

44 (New): The system of claim 38, wherein sending the second version includes launching an instance of a web browser from the word processor and submitting the second version through the web browser to the translation service.
